# Contents (Extendend)

<b>I</b>	<b>Fundamentals</b>	<b>2</b>
<b>1</b>	<b>Probabilities and Inference</b>	<b>2</b>
1.1	Probability	2
1.2	Collections of Probabilities	2
1.2.1	Joint Probability	2
1.2.2	Marginal Probability	2
1.2.3	Conditional Probability	2
1.3	Independence	2
1.4	Product Rule & Sum Rule	2
1.5	Bayes' Theorem	2
1.6	Expectation	2
1.7	Variance & Covariance	2
1.8	Information & Entropy	2
1.9	Bounds on Signal Compression	2
1.10	Kullback-Leibler Divergence	2
1.11	Inductive Bias	2
1.12	The Language of Inference	2
1.12.1	Prior	2
1.12.2	Likelihood	2
1.12.3	Evidence/Marginal Likelihood	2
1.13	Point Estimation	2
1.13.1	Maximum Likelihood	2
1.13.2	Maximum a Posteriori	2
1.14	Laplace's Method	2
1.15	Variational Inference	2
1.16	Markov Chain Monte Carlo	2
1.16.1	Importance Sampling	2
1.16.2	Rejection Sampling	2
1.16.3	Hamiltonian MCMC	2
<b>2</b>	<b>Linear Algebra</b>	<b>2</b>
2.1	Vectors	2
2.1.1	Vector addition and scaling	2
2.1.2	Inner Products	2
2.1.3	Vector Norms	2
2.1.4	Angle	2
2.1.5	Vector Mean and Variance	2
2.1.6	Linearity and Approximations from Calculus	2

2.1.7	Linear Independence and Basis	2
2.1.8	Orthogonality	2
2.1.9	Vector Mean and Variance	2
2.1.10	Vectorized data	2
2.1.11	$k$ -means clustering: A Taste of Automatic Structure Discovery	2
2.2	Matrices	2
2.2.1	Matrix addition and transpose	2
2.2.2	Matrix-vector and matrix-matrix multiplication	2
2.2.3	Geometric matrices	2
2.2.4	Convolution matrices	2
2.2.5	Finite Differences	2
2.2.6	Matrix representations of graphs	2
2.2.7	Affine functions	2
2.2.8	Systems of Linear Equations & Compositions of Linear Functions	2
2.2.9	Matrix Inverses & Psuedo-inverses	2
2.2.10	Matrix Powers & Eigensystems	2
2.2.11	Common matrix factorizations	2
2.2.12	Singular Value Decomposition	2
2.2.13	Least Squares	2
<b>3</b>	<b>Signal Processing</b>	<b>2</b>
3.1	Basic Processing	2
3.1.1	Rescaling and centering	2
3.1.2	Histograms	2
3.1.3	Spectral Decay and effective dimensionality	2
3.1.4	Moving Functionals	2
3.1.5	Interpolation and Resampling	2
3.1.6	Linear Filters	2
3.1.7	Nonlinear Filters	2
3.1.8	Fourier Transform	2
3.1.9	Wavelet Transforms	2
3.1.10	Shapelets	2
3.2	Signal Inference	2
3.2.1	Kalman Filter	2
3.2.2	Hidden Markov model	2
<b>4</b>	<b>Optimization</b>	<b>2</b>
<b>II</b>	<b>Representation</b>	<b>3</b>

<b>5</b>	<b>Smoothing, Compression, and Information Loss</b>	<b>3</b>
5.0.1	Basis sparsity and the Fourier Transform	3
5.0.2	Geometric Compression	3
5.0.3	Introduction to Dimensionality Reduction	3
<b>6</b>	<b>Basic Basis Function Expansion</b>	<b>4</b>
6.1	Polynomial Basis	4
6.2	Periodic Basis	4
6.3	Piecewise Linear	4
6.4	Radial Basis Functions	4
6.5	Sigmoid Functions	4
<b>7</b>	<b>Adaptive Basis Function Methods</b>	<b>5</b>
7.1	Kernels	5
7.1.1	The Gram matrix	5
7.1.2	The Kernel Trick	5
7.1.3	Learning the Kernel	5
7.2	Gaussian Processes	5
7.3	Neural Networks	5
7.4	Kernel Machines	5
<b>8</b>	<b>Latent Processes</b>	<b>5</b>
8.1	Discrete Latent Processes	5
8.2	Continuous Latent Processes	5
8.3	Latent Processes as Probabilistic Graphical Models	5
<b>9</b>	<b>Automatic Structure Discovery</b>	<b>5</b>
9.1	Clustering and Graphical Community Identification	5
9.2	Hierarchical clustering	5
9.3	Mean and mediod based clustering	5
9.4	Spectral clustering	5
9.5	Principal components analysis	5
9.6	Linear discriminant analysis	5
9.7	T-distributed stochastic neighbor embedding	5
9.8	Laplacian Eigenmaps and UMAP	5
<b>10</b>	<b>Metric Learning</b>	<b>5</b>
<b>11</b>	<b>Representation examples</b>	<b>5</b>
11.1	Image and video	5
11.2	Speech and sound	5
11.3	Text and genetic sequence	5
<b>III</b>	<b>Inference</b>	<b>6</b>

<b>12 Linear methods</b>	<b>6</b>
12.1 Linear Regression	6
12.1.1 Least Squares and Linear Regression	6
12.1.2 Basis Function Expansion	6
12.1.3 Solution Penalties: A Return to Vector Norms and Geometry	6
12.1.4 Bayesian Linear Regression	6
12.2 Logistic Regression	6
12.3 Generalized Linear Models	6
12.3.1 The Exponential Family	6

# Fundamentals

## 1 Probabilities and Inference

### 1.1 Probability

### 1.2 Collections of Probabilities

#### 1.2.1 Joint Probability

#### 1.2.2 Marginal Probability

#### 1.2.3 Conditional Probability

### 1.3 Independence

### 1.4 Product Rule & Sum Rule

### 1.5 Bayes' Theorem

### 1.6 Expectation

### 1.7 Variance & Covariance

### 1.8 Information & Entropy

### 1.9 Bounds on Signal Compression

### 1.10 Kullback-Leibler Divergence

### 1.11 Inductive Bias

### 1.12 The Language of Inference

#### 1.12.1 Prior

#### 1.12.2 Likelihood

#### 1.12.3 Evidence/Marginal Likelihood

### 1.13 Point Estimation

#### 1.13.1 Maximum Likelihood

#### 1.13.2 Maximum a Posteriori

### 1.14 Laplace's Method

### 1.15 Variational Inference

### 1.16 Markov Chain Monte Carlo

#### 1.16.1 Importance Sampling

#### 1.16.2 Rejection Sampling

#### 1.16.3 Hamiltonian MCMC

## 2 Linear Algebra

### 2.1 Vectors

#### 2.1.1 Vector addition and scaling

#### 2.1.2 Inner Products

#### 2.1.3 Vector Norms

#### 2.1.4 Angle

#### 2.1.5 Vector Mean and Variance

#### 2.1.6 Linearity and Approximations from Calculus

# Representation

## 5 Smoothing, Compression, and Information Loss

5.0.1 Basis sparsity and the Fourier Transform

5.0.2 Geometric Compression

5.0.3 Introduction to Dimensionality Reduction

## **6 Basic Basis Function Expansion**

### **6.1 Polynomial Basis**

### **6.2 Periodic Basis**

### **6.3 Piecewise Linear**

### **6.4 Radial Basis Functions**

### **6.5 Sigmoid Functions**

## **7 Adaptive Basis Function Methods**

### **7.1 Kernels**

#### **7.1.1 The Gram matrix**

#### **7.1.2 The Kernel Trick**

#### **7.1.3 Learning the Kernel**

### **7.2 Gaussian Processes**

### **7.3 Neural Networks**

### **7.4 Kernel Machines**

## **8 Latent Processes**

### **8.1 Discrete Latent Processes**

### **8.2 Continuous Latent Processes**

### **8.3 Latent Processes as Probabilistic Graphical Models**

## **9 Automatic Structure Discovery**

### **9.1 Clustering and Graphical Community Identification**

### **9.2 Hierarchical clustering**

### **9.3 Mean and mediod based clustering**

### **9.4 Spectral clustering**

### **9.5 Principal components analysis**

### **9.6 Linear discriminant analysis**

### **9.7 T-distributed stochastic neighbor embedding**

### **9.8 Laplacian Eigenmaps and UMAP**

## **10 Metric Learning**

## **11 Representation examples**

### **11.1 Image and video**

### **11.2 Speech and sound**

### **11.3 Text and genetic sequence**

# Inference

## 12 Linear methods

### 12.1 Linear Regression

#### 12.1.1 Least Squares and Linear Regression

#### 12.1.2 Basis Function Expansion

#### 12.1.3 Solution Penalties: A Return to Vector Norms and Geometry

#### 12.1.4 Bayesian Linear Regression

### 12.2 Logistic Regression

### 12.3 Generalized Linear Models

#### 12.3.1 The Exponential Family

#### 12.3.2 Conjugacy and Priors

## 13 Adaptive Basis Function Methods

### 13.1 Inference with Neural Networks

#### 13.1.1 Single Neurons

#### 13.1.2 Feedforward Neural Networks

#### 13.1.3 Structured Neural Networks

#### 13.1.4 Weight Initialization and Random Matrices

#### 13.1.5 Optimization in Neural Networks

#### 13.1.6 Probabilistic Neural Networks

### 13.2 Inference with Kernel Machines

### 13.3 Inference with Gaussian Processes

# Application

## 14 Step Zero

### 14.1 Understanding the Problem You Care About

### 14.2 Specifying the Inductive Bias

## 15 Exploratory Data Analysis

### 15.1 Dataset Versioning

### 15.2 Visualization

### 15.3 Gauging Problem Difficulty

### 15.4 Starting Simply

## 16 Model Selection

### 16.1 Standard Model Selection

### 16.2 Bayesian Model Selection

## 17 Hyperparameter Selection

### 17.1 Heuristics

### 17.2 Bayesian Optimization

## 18 Datasets and Distribution Shift

### 18.1 Training on the Test Set

### 18.2 Internal Covariate Shift

### 18.3 Distribution Shift

## 19 Application: Computer Vision

## 20 Application: Linguistics & Genomics

## 21 Application: Robotics & Control

# Frontiers

## 22 Model Composition

### 22.1 Probabilistic Graphics Models and Adaptive Basis Methods

## 23 Returning to Control: Machine Learning in Society

### 23.1 Autonomous Vehicles

### 23.2 Autonomy in Weapon Systems

### 23.3 Robustness in Machine Learning

## 24 Brain Machine Interfacing

### 24.1 Studying the Brain

### 24.2 Imitating the Brain

### 24.3 Machine intelligence as analogies for neurocomputation

## 25 Machine Intelligence: What will it take?

### 25.1 The AI effect

### 25.2 Hype and Reality

### 25.3 Constructing Cockroaches

# Appendices

### 25.4 Notation

### 25.5 Calculus

#### 25.5.1 Derivatives

#### 25.5.2 Chain Rule & Product Rule

#### 25.5.3 Integrals

### 25.6 Complex numbers as dynamic objects
